Report Date: March 25, 2019

1.0 INTRODUCTION

Exova was retained to evaluate the "FUSION™ Non-Combustible Rainscreen Systems" exterior wall panel system in accordance with ASTM E283, E331 and E330 as outlined in Proposal number 18-006-570736.

Upon receipt, the specimen was assigned the following Exova Specimen Number:

Client Specimen Description

Exova Specimen No.

18-06-B0193-2

FUSION™ Non-Combustible Rainscreen System

(T-Panel Scheme / 3 panels, not individually pressure isolated)

Test Backup Wall Description:

8 ft. x 8 ft Opaque wall comprising of one vertical sheathing joint (with joint sealed)

Frame Construction: 6" Steel Z-Bar (vertical), 16 ga / 16" O/C

2" Steel Z Bar (horizontal), 16 ga / 16" O/C

Sheathing: 1/4" thick Plexiglas (simulating exterior gypsum sheathing with installed

air-tight air barrier / water resistive barrier). Note: Clear Plexiglas (simulated sheathing panels) were required for the observation of water

penetration (ASTM E331).

2.0 PROCEDURE

Test Method	Test Description	
ASTM E283-04 (2012)	Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen	
ASTM E331-00 (2016)	Water Penetration of Exterior Windows, Skylights, Doors and Curtain Walls by Uniform Static Air Pressure Difference	
ASTM E330-14	Standard Test Method for Structural Performance of Exterior Windows, Skylights, Doors and Curtain Walls by Uniform Static Air Pressure Difference (Modified)	

Note: SI units are the primary units of measure.

Configuration No. 1:

The assembly was tested with an uncompromised simulated air-tight air / water resistive barrier on sheathing (*Plexiglas sheathing intact / as delivered to Exova*). The air-tight Plexiglas substrate was employed to simulate an air / water resistive barrier sheathing membrane in conjunction with the rainscreen system attached through the Plexiglas to the interior supporting studs.

Configuration No. 2:

The assembly was tested with a compromised air / water resistive barrier (simulation of a poorly installed air / water resistive barrier by drilling 1/8" diameter holes through the Plexiglas) in accordance with AAMA 508-14 to induce an air leakage of 0.6 L/s.m² @ 75 Pa through the Plexiglas sheathing.

2.0 PROCEDURE (CONTINUED)

Test Wall Section Description & Details:

The back-up test wall section (air / water barrier) was constructed in an Exova test frame as per the detail drawing.
